SUMMARY

Frontend developer with hands-on experience shipping React interfaces, and a Master's in Computer Applications specializing in Generative AI. Comfortable across the stack, from building production-ready UI to training and deploying machine learning models. Currently building applied GenAI projects using retrieval-augmented generation and LLM APIs. Looking for roles in frontend engineering, applied AI, or AI-adjacent product work where I can contribute from day one and keep going deeper into GenAI systems.

SKILLS

Languages: Python, JavaScript, HTML, CSS, SQL

Frontend: React, Tailwind CSS, Node.js, Figma

Data & ML: Pandas, NumPy, Scikit-learn, NLTK, Matplotlib, Seaborn

Generative AI: LLM APIs, Prompt Engineering, LangChain, Vector Databases (RAG fundamentals)

Tools & Platforms: Git, GitHub, MySQL, Linux (Ubuntu), Docker (basics), Kubernetes (basics), Jupyter Notebook, Google Colab

Foundations: OOP, Data Structures & Algorithms, Agile

PROJECTS

DocuMind — RAG-Based Document Q&A Assistant

Python, LangChain, Vector Database, LLM API, React

- Building a retrieval-augmented generation system that lets users upload a document and ask natural-language questions, with answers grounded in the source text and cited back to the relevant passage.
- Designing the retrieval pipeline: chunking strategy, embedding generation, vector search, and prompt construction to reduce hallucination and keep responses traceable.

Email/SMS Spam Classifier

Python, Pandas, NumPy, Scikit-learn, NLTK, Pickle, HTML/CSS/JS

- Built a text classification pipeline to flag spam messages, covering tokenization, stopword removal, and stemming before TF-IDF feature extraction.
- Trained and evaluated multiple classification models, selected the best-performing one, and serialized it for reuse.
- Deployed the model behind a simple web interface for real-time message classification.

Laptop Price Predictor

Python, Pandas, NumPy, Scikit-learn, Pickle, React

- Built a regression pipeline to estimate laptop prices from specifications such as brand, processor, RAM, storage, GPU, and OS.
- Cleaned and preprocessed a real-world pricing dataset, handling categorical encoding and outliers before model training.
- Connected the trained model to a React front end so users can enter specs and get an instant price estimate.

EXPERIENCE

Frontend Developer Intern — E-Tech Services Pvt. Ltd.

Apr 2026 – Jun 2026

Gurugram, Haryana | React.js, HTML, CSS, JavaScript, Git

- Converted UI/UX designs into responsive, cross-device web interfaces using React, HTML, CSS, and JavaScript.
- Debugged and optimized existing pages for performance and consistency across browsers and screen sizes.
- Worked directly with designers and backend developers to ship features in a small team environment.
- Followed Git-based version control practices and kept code modular and reusable across the codebase.

EDUCATION

Alliance University — Master of Computer Applications, Generative AI

2024 – 2026

Bengaluru, India

Lachoo Memorial College of Science (Autonomous) — Bachelor of Computer Applications

2021 – 2024

Jodhpur, India

CERTIFICATIONS

- Fundamentals of Deep Learning
- Machine Learning and NLP Basics
- Python for Data Science and AI Development
- HTML, CSS and JavaScript for Web Development
